(54) Title: A METHOD AND APPARATUS FOR INFORMATION SURVEYING

(57) Abstract: A method and apparatus are presented with which to conduct information surveys. Contemporary methods of accessing and exploiting information resources, including search techniques and category browsing, have become less effective and efficient at these tasks due to the growing infoglut and the widening knowledge gap between the content, structure, and navigational paths of information resources on the one hand, and what users know and desire of these on the other. The information survey method and apparatus disclosed herein enables a user to survey information in order to rapidly discover the area of the information resource that is most useful to them, the survey niche, and evaluate the knowledge and information found there.
